

# Guarantee Certificate

## for the **Hytect** coating

The **Hytect** coating is burned-in at high temperatures. It is as wear-resistant as the surface of the particular tile itself. This means: as long as the wear remains within the limits of the respective stress group, the photocatalytic properties are maintained permanently already at normal lighting by artificial light or sunlight. This guarantee covers all first-choice tiles produced by Deutsche Steinzeug Cremer & Breuer AG and treated with the **Hytect** coating.
